

University of Maine System Policies

General

The University of Maine System is committed to protecting the environment and the safety of all members of the University community in all operations and activities.

Requirements

Individual campuses, organizational units, and employees must comply with all applicable environmental health and safety requirements. Our goal is to integrate environmental health and safety management systems into every level of the organization. In the absence of specific laws or regulations, consensus-based standards or best management practices should be adopted.

Each campus President designates an environmental and safety management contact and establishes a safety committee to address required safety and environmental program elements.

Each campus establishes a system of training, documentation, recordkeeping, and audits to identify required training programs and ensure that appropriate records are maintained.

Responsibilities

The Chancellor is responsible for assuring that all units of the University of Maine System are in compliance with pertinent Federal and State regulations regarding safety and health, and environmental protection.
