Date: April 25th, 2011

FM has constructed a mobile, self contained fire pit that will now be utilized for campus bonfires. This steel device will replace the traditional Jersey barrier and sand fire pits. It will provide efficient setup, takedown, cleanup and disposal for bonfires. A fire permit and event management form will still be required as usual. The fee for renting this unit will be \$100. Included in the rental fee will be delivery, wood fuel for one fire, unit pickup and disposal of the ashes. If additional fuel or services are requested by the customer, labor and equipment costs will be added to the base fee as appropriate. As always, any damages to University property resulting from bonfire activities will be charged as well, however this device should minimize or eliminate damages compared to the traditional pit bonfire setups.

Thanks.

Ger
